                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RESULT :
                                                                                                                                                                                                                                                                          CC The invention relates to a novel human tyrosine phosphatase, histidine CC domain-protein tyrosine phosphatase (HB-PTP; AAB29661) and to human CC HB-PTP nucleic acids (AAC81224, AAC8125, AAC81262, AAC81263). The CC HB-PTP pucleic acids (AAC81224, AAC8125, AAC81263). The CC HB-PTP gene is located on chromosome 3p21.3. This region is frequently CC found to be deleted in lung cancers, and is therefore thought to contain CC a tumour suppressor gene. The invention also relates to expression CC vectors and host cells containing human HB-PTP nucleic acids; the CC recombinant production of HB-PTP; anticancer drugs containing HB-PTP; CC gene therapy compositions containing DAA encoding HB-PTP; diagnostic CC reagents containing HB-PTP oligonucleotides; antibodies specific for CC HB-PTP; and an immunoassay method using HB-PTP-specific antibodies for Use in cancer diagnosis and investigation. HB-PTP proteins, nucleic acids and antibodies may be used in the treatment, investigation and diagnosis CC cancers, particularly those of the lung. The present sequence CC represents a human HB-PTP CDNA fragment, CKALI6.

                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes isolated, enriched or purified nucleic acids encoding PTP04, SAD, PTP05, PTP10, ALP and ALK-7 proteins. The present sequence encodes human ALP. The above proteins, other than ALK-7, are protein tyrosine phosphatases (PTPs) and are used to identify substances that modulate their activity (i.e. agonists and antagonists, substances that modulate their activity (i.e. agonists and antagonists.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New nucleic acid encoding specific protein tyrosine phosphatases useful for identifying specific modulators for treatment and prevention of cancer and neurodegenerative disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   05-NOV-1998

The invention relates to a novel human tyrosine phosphatase, histidine CC domain-protein tyrosine phosphatase (HD-PFP; AAB29661) and to human CC HD-PFP pene is located (AAC81224, AAC81225, AAC81262). AAC81263). The CC HD-PFP pene is located on chromosome 3p21.3. This region is frequently CC found to be deleted in lung cancers, and is therefore thought to contain CC a tumour suppressor gene. The invention also relates to expression CC exectors and host cells containing human HD-PFP nucleic acids; the CC recombinant production of HD-PTP; anticancer drugs containing HD-PFP; CC creagents containing HD-PTP, anticancer drugs containing HD-PTP; and an immunoassay method using HD-PTP-specific antibodies specific for CC CC containing HD-PTP oligonucleotides; antibodies specific for CC containing HD-PTP oligonucleotides; antibodies for CC use in cancer diagnosis and investigation. HD-PTP proteins, nucleic acids CC and antibodies may be used in the treatment, investigation and diagnosis CC represents cDNA encoding human HD-PTP.
                                                                                                                                                                                                                                                                                                                                                                                                                       Matches

                                                                                                                                                                                                                        RESULT 14
                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a novel human tyrosine phosphatase, histidine Cd domain-protein tyrosine phosphatase (HD-PTP; AAB29661) and to human CC HD-PTP nucleic acids (AAC81224, AAC81225, AAC81262, AAC81263). The CC HD-PTP gene is located on chromosome 3p21.3. This region is frequently CC found to be deleted in lung cancers, and is therefore thought to contain CC a tumour suppressor gene. The invention also relates to expression CC vectors and host cells containing human HD-PTP nucleic acids; the CC recombinant production of HD-PTP; anticancer drugs containing HD-PTP; Gene therapy compositions containing by anticancer drugs containing HD-PTP; CC gene therapy compositions containing HD-PTP; antibodies specific for CC HD-PTP; and an immunoassay method using HD-PTP-specific antibodies for use in cancer diagnosis and investigation. HD-PTP proteins, nucleic acids and antibodies may be used in the treatment, investigation and diagnosis cof cancers, particularly those of the lung. The present sequence

expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. AAK64703 to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK5492 to AAK54950 and AAM62169 represent sequences used in the exemplification of the present invention. amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis a treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased to AAK64702 encode e the human immune/haematopoietic antigen in AAM82170 to AAM91921. (I) have cytosta cytostatic and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          OM nucleic -
Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being print and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                nucleic search, using sw model

                                                                                                                                                                                                  of Bibb et al., Gene 30:157-66(1984) as implemented at the http://www.nih.go.jp/
jun/cgi-bin/frameplot.pl. CAUTION: We may not have predicted the correct initiation codon. Where possible we choose an initiation codon (atg, gtg, ttg or (att)) which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the initiation codon). If this cannot be identified we choose the most upstream initiation codon.

IMPORTANT: This sequence MAY NOT be the entire insert of the sequenced clone. It may be shorter because we arrange for a small overlap between neighbouring submissions. Cosmid 7H1 lies between 10A5 and 7B7 on the AseI-B genomic restriction fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1 cacgcaaaggcgcgtcggccagccacgac 29
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The more significant matches with motifs in the PROSITE database are also included but some of these may be fortuitous. The length in codons is given for each CDS.

Usually the highest scoring match found by fasta o is given for CDS which show significant similarity to other CDS in the database. The position of possible ribosome binding site sequences are given where these have been used to deduce the initiation codon. Gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    prediction is based on positional base preference in codons using a specially developed Hidden Markov Model (Krogh et al., Nucleic Acids Research, 22(22):4768-4778(1994)) and the Frameplot program
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Submitted (20-JAN-1998) Streptomyces coelicolor sequencing project, Sanger Centre, Wellcome Trust Genome Campus, Hinxton, Cambridge CB10 15A E-mail: barrell@sanger.ac.uk Cosmids supplied by Prof. David A.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       4 gcaaaggcgcgtcggccagccac 26
                      Notes:

Notes:

Details of M. tuberculosis sequencing at the Sanger Centre are available on the World Wide Web.

(URL, http://www.sanger.ac.uk/Projects/M_tuberculosis/) CDS have been renumbered from the original cosmid submissions but the old gene designations are in brackets after the new gene numbers. Gene prediction was based on a Hidden Markov Model of TB genes implemented in TBparse (Krogh) supplemented with visual inspection of positional base preference in codons, especially where there is an increase in the observed/expected third position G + C.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Submitted (11-JUN-1998) Submitted on behalf of the Mycobacterium tuberculosis sequencing and mapping teams, Sanger Centre, Wellcome Trust Genome Campus, Hinxton, Cambridge CB10 ISA Unite de Genetique Moleculaire Bacterienne, Institut Pasteur, 28 rue du Docteur Roux, 75724 Paris Cedex 15, France E-mail: parkhillesanger.ac.uk

**NOTE: This is a 'working draft' sequence. It currently
** consists of 38 contigs. The true order of the pieces
** is not known and their order in this sequence record is
** arbitrary. Gaps between the contigs are represented as
** runs of N, but the exact sizes of the gaps are unknown.
** This record will be updated with the finished sequence
```

FEATURES SOUTCE Gene CDS	COMMENT	JOURNAL PUBMED REFERENCE AUTHORS TITLE JOURNAL	REFERENCE AUTHORS TITLE	SOURCE ORGANISM	ACCESSION VERSION	LOCUS DEFINITION
Coding sequences below are predicted from manually evaluated Computer analysis, using similarity information and the programs; GLIMMER; http://www.tipi.org/softlab/glimmer/glimmer.html and GeneMark; http://wpal.biology.gatech.edu/GeneMark; EC numbers were kindly provided by Junko Yabuzaki and the Kyoto and Pedro Romero and peter Karp at EcoCyc. The analyses of ribosome binding sites and promoter binding sites were kindly provided by Heladia Salgado, Julio Collado-vides and RequonDB; http://kinich.cifn.unam.mx:8850/db/regulondb_intro.frameset This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistries or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence Location/Qualifiers Jorganism="Salmonella typhimurium LT2" Strain="MZC" Jorganism="Salmonella typhimurium LT2" Jorgane="MZC" Jorganism="Salmonella typhimurium LT2" Jorgane="MZC" Jorde="MZC" Jorde="MZC	Park Bouleward, St. Louis, MO 63108, USA Supported by NIH grant 5U 01 AI43283	Nature 413 (6858), 852-856 (2001) 11677609 2 (bases 1 to 26591) The Salmonella typhimurium Genome Sequencing Project.     No. is the number of results predicted by chance to have a
re greater than or equal to the score of the result being printed,
is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          nucleic search, using sw model

Patent No. 6107060
GENERAL INFORMATION:
APPLICANT: Keeling, Peter
APPLICANT: Guan, Hanping
TITLE OF INVENTION: Starch Encapsulation
NUMBER OF SEQUENCES: 37
                                                                                                                                                                                                                                                                                                                                          CURRENT APPLICATION DATA:
